The invention relates to a substantially purified nectinalpha, beta, gamma and nectin-4 polypeptides and their corresponding polymucleotides. Nectin DNA and protein are useful for treating a disease associated with cell adhesion activity, adherens junction formation activity, epithelial corresponding activity. The epithelial or migration activity, viral polypeptide binding activity. The epithelial or midration activity, viral polypeptide binding activity. The epithelial or endothelial barrier function disorder which is treated by the above mentioned method is inflammation, sepsis, oedema, diabetic retinopathy, asthma, allergy, allograft rejection, metastasis of cancer cells, parcellular transport discorders such as magnesium transport defects in the kidney or inflammatory bowel disease. Nectin DNA is also useful for inhibiting angiogenic condition of a tissue or a subject, such as condification or angiogenic condition of a tissue or a subject, such as schaemia, atherosclerosis, ischaemia-reperfusion injury, thrombosis, stroke, restenosis, tumour growth and treating herpeavirus infection. Nectin is also useful for modulating proliferation or migration of an endothelial cell, an epithelial cell or a smooth muscle cell (vascular smooth muscle cell). The present sequence is human nectin-3beta protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö

The invention relates to a substantially purified nectinalsha, beta, gamma and nectin-4 polypeptides and their corresponding polynucleotides. Nectin DNA and protein are useful for treating a disease associated with cell adhesion activity, adherens junction formation activity, epithelial or endothelial barrier function activity, endothelial proliferation or migration activity, viral polypeptide binding activity. The epithelial or endothelial barrier function disorder which is treated by the above mentioned method is inflammation, sepsis, oedema, diabetic retinopathy, paracellular transport disorders such as magnesium transport defects in the kidney or inflammatory bowel disease. Nectin DNA is also useful for inhibiting angiogenesis in a mammal and treating endothelial migration, proliferation or angiogenic condition of a tissue or a subject, such as isolatemia, atherosclerosis, ischaemia-reperfusion injury, thrombosis,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Novel purified nectin-3 and nectin-4 polypeptides which bind to nectin-1, useful for treating or preventing heart failure, malaria, glomerulonephritis, endometriosis, leukemia, asthma, allergy, edema,
                                                                                                                                                                                                                                                                                   Human; nectin-3beta; therapy; cell adhesion; cell proliferation; sepsis; paracellular transport disorder; kidney; diabetic retinopathy; allergy; allograft rejection; metastasis; restenosis; inflammatory bowel disease; oedema; atherosclerosis; ischaemia-reperfusion injury; thrombosis; stroke; tumour; cancer; herpesvirus infection; asthma; chromosome 3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     stroke, restenosis, tumour growth and treating herpesvirus infection. Nectin is also useful for modulating proliferation or migration of an endothbelial cell, an epithelial cell or a smooth muscle cell (vascular smooth muscle cell). The present sequence is a fusion protein encoding amino acids from mouse nectin-3 protein and the rest form human nectin-3beta protein. Human nectin-3beta gene is located on chromosome 3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Youakim A;

The invention relates to a substantially purified nectinialpha, beta, camma and nectin-4 polypeptides and their corresponding polynucleotides. CC gamma and nectin-4 polypeptides and their corresponding polynucleotides. Nectin DNA and protein are useful for treating a disease associated with cell adhesion activity, adherens junction formation activity, epithelial cor endothelial barrier function disorder which is treated by the above motorioned method is inflammation, sepsis, oceems, diabetic retinopathy, asthma, allergy, allograft rejection, metastasis of cancer cells, asthma, allergy, allograft rejection, metastasis of cancer cells, cathma, allergy, allograft rejection, metastasis of cancer cells, cathma, allergy, allograft rejection, metastasis of cancer cells, cathma, and angiogenesis in a mammal and treating endothelial migration, conjiferation or angiogenic condition of a tissue or a subject, such as includent and reating endothelial migration, conditions or a subject such as series, tumour growth and treating herpesvirus infection. Nectin is also useful for modulating proliferation or migration of an endothelial cell, an epithelial cell or a smooth muscle cell, (vascular semooth muscle cell). The present sequence is human nectin-3beta protein containing 6 amino acids deleted from the N-terminal end. Human nectin-3beta protein.
                                                                                                                                                                                                                                                   Novel purified nectin-3 and nectin-4 polypeptides which bind to nectin-1, useful for treating or preventing heart failure, malaria, glomerulonephritis, endometriosis, leukemia, asthma, allergy, edema,

```
The invention relates to a substantially purified nectinialpha, beta,

gamma and nectin-4 polypeptides and their corresponding polymucleotides.

Nectin DNA and protein are useful for treating a disease associated with

cell adhesion activity, adherens junction formation activity, epithelial

cell adhesion activity, viral polypeptide binding activity. The epithelial

cell adhesion activity, viral polypeptide binding activity. The epithelial or

migration activity, viral polypeptide binding activity. The above

morthelial barrier function disorder which is treated by the above

mentioned method is inflammation, sepsis, oedema, diabetic relingathy,

paracellular transport disorders such as magnesium transport defects in

the kidney or inflammatory bowel disease. Nectin DNA is also useful for

the kidney or inflammatory bowel disease. Nectin DNA is also useful for

confiberation or angiogeneis in a mammal and treating endothelial migration,

proliferation or angiogenic condition of a tissue or a subject, such as

cischaemia, atherosclerosis, ischaemia-reperfusion injury, thrombosis,

stroke, reserenceis, unmour growth and treating herpesvirus infection.

Nectin is also useful for modulating proliferation or migration of an

endothelial cell, an epithelial cell or a smooth muscle cell (vascular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel purified nectin-3 and nectin-4 polypeptides which bind to nectin-1, useful for treating or preventing heart failure, malaria, glomerulonephritis, endometriosis, leukemia, asthma, allergy, edema,

Nectin-3 is an immunoglobulin-like cell adhesion molecule that shows homophilic and heterophilic cell-cell adhesion activities. Nectin-3 polypeptides and polynucleotides are useful for investigating the mechanisms of cell adhesion, infiltration and metastasis of cancer cells, the diagnosis of malignancies of various cancers, and the development of methods for the

gamma and nectin-4 polypeptides and their corresponding polymucleotides. Nectin DNA and protein are useful for treating a disease associated with cell adhesion activity, adherens junction formation activity, opithelial or endothelial barrier function activity, endothelial proliferation or migration activity, viral polypeptide binding activity. The epithelial or endothelial barrier function disorder which is treated by the above mentioned method is inflammation, sepsis, oedems, diabetic retinopathy, asthma, allergy, allograft rejection, metastasis of cancer cells, paracellular transport disorders such as magnesium transport defects in the kidney or inflammatory bowel disease. Nectin DNA is also useful for inhibiting anglogenesis in a mammal and treating endothelial migration, well feration or and consideration or and consideration in the real paracellular properties.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 GRRITCVVKHPALEKDIRYSFILDIQYAPEVSVTGYDGNWFVGRKGVNLKCNADANPPPF 300
                                                                                   purified nectin-3 and nectin-4 polypeptides which bind to nectin-1, 1 for treating or preventing heart failure, malaria, rulonephritis, endometriosis, leukemia, asthma, allergy, edema,
                                                                                                                                                                                                                                                                                                                                                                                                                                                      proliferation or angiogenic condition of a tissue or a subject, such as ischemia, atherosclerosis, ischemia-reperfusion injury, thrombosis, stroke, restenosis, tumour growth and treating herpesvirus infection. Nectin is also useful for modulating proliferation or migration of an endothelial cell, an epithelial cell or a smooth muscle cell (vascular smooth muscle cell). The present sequence is human nectin-3gamma protein. Human nectin-3gamma protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         KSVWSRLDGQWPDGLLASDNTLHFVHPLTFNYSGVYICKVTNSLGQRSDQKVIYISDVPF

RESULT 7

```
The invention relates to a substantially purified nectinisalpha, beta,

C gamma and nectin-4 polypeptides and their corresponding polynucleotides.

Nectin DNA and protein are useful for treating a disease associated with

cell adhesion activity, adherens juuction formation activity, epithelial

cell adhesion activity, viral polypeptide bhinding activity. The epithelial

con endothelial barrier function activity, endothelial proliferation or

con endothelial barrier function disorder which is treated by the above

mentioned method is inflammation, sepsis, oedema, diabetic retinopathy,

cendothelial barrier function disorder which is treated by the above

mentioned method is inflammation, sepsis, oedema, diabetic retinopathy,

cendothelial paragraft rejection, metastassis of cancer cells,

centroling anglogents in a mammal and treating endothelial migration,

confinibiting anglogenesis in a mammal and treating endothelial migration,

confinibiting anglogenesis, ischaemia-reperfusion injury, thrombosis,

controling atherosclerosis, ischaemia-reperfusion injury, thrombosis,

stroke, restenosis, tumour growth and treating herpesvirus infection.

Nectin is also useful for modulating proliferation or migration of an

cendothelial cell, an epithelial cell or a smooth muscle cell (vascular

conducted in the present sequence is mouse nectin-3gamma protein
                                                                                                                                                                                                                                                                                                                                                                                                  Mouse, nectin-3gamma, therapy, cell adhesion, cell proliferation, sepsis, paracellular transport disorder, kidney, diabetic retinopathy, allergy, allograft rejection, metastasis, restenosis, inflammatory bowel disease, oedema, atherosclerosis, ischemia reperfusion injury, thrombosis, stroke, tumour, cancer, herpesvirus infection, asthma.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence represents a murine nectin-3 polypeptide. Nectin-3 is an immunoglobulin-like cell adhesion molecule that shows homophilic and heterophilic cell-cell adhesion activities. Nectin-3 polypeptides and polynucleotides are useful for investigating the mechanisms of cell adhesion, infiltration and metastasis of cancer cells, the diagnosis of malignancies of various cancers, and the development of methods for the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to a novel method for identifying a candidate p53 pathway modulating agent. The method comprises providing an assay system having a purified IG polypeptide or nucleic acid, or their functionally active fragment or derivative. The method is useful for identifying modulators of the p53 pathway, particularly for identifying agents for reating disorders (e.g. breast cancer, colon cancer, Kidney cancer, Iung cancer or cancer of the ovary) associated with defective p53 function. The identified modulators are useful as targets for novel therapeutics. The method is also useful for disagnosing disorders associated with defective p53 function. The IG proteins or nucleic acids are useful as modifiers of the p53 pathway, and as therapeutic targets for disorders associated with defective p53 function. This sequence represents a human protein relating to the human IG genes used in the assay for identifying modulators of the p53 pathway of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Identifying a candidate p53 pathway modulators that are useful as targets for therapeutics or for diagnosing cancers associated with defective p53 function, by providing an assay system having a purified IG polypeptide

This invention describes novel cytostatic polymucleotide and polypeptide sequences which can be used in a method for diagnosing prostatic cancer or the risk of developing prostatic cancer. Diagnosis is based on determining over transcription or over expression of the sequences in prostatic tissue. Screening for inhibitors of the sequences or detection with a prostatic tissue. Screening for inhibitors of the sequences or detection of substances involves a binding assay, any compounds that bind are selected, optionally after deconvolution of mixtures. Detection of a predetermined minimum level of the reporter indicates the presence of tumour cells. Inhibitors can be chosen from antisense oligomucleotides, short-interferring RNA or ribozymes; an organic molecule of molecular weight below 5000, preferably 300, that binds to the polypeptide, in a petamer against the polypeptide, that binds to the polypeptide, so preferably humanised or human; an anti-idotype, non-human (monoclonal) antibody directed against Ab or any of the above derivatised with a reporter group, cell toxin, immunostimulatory molecules and/or cancer by differential expression analysis, using DNA microarrays, between normal and tumorous tissues, with (over)expression being detected by quantitative PCR. Analysis of prostatic cancer samples showed that CD24 was upregulated in many of them. Sections of tissue, isolated from prostatic cancer patients, or subjects at risk, were incubated concernational with anti-human CD4 murine monoclonal antibodies; biocony strongly but non-malignant cells only waskly. In 15 of 63 samples were counterstained with hemalum (blue). Malignant cells stained second antibodiase accolur former (brown). The samples were counterstained with hemalum (blue) accolur former (brown), membrane and cytoplasmic staining was very strong, and encoarcinoma, membrane and cytoplasmic staining was very strong, invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       10;

Diagnosis is based on determining over transcription or over expression of the sequences in prostatic tissue. Screening for inhibitors of the sequences or detection substances involves a binding assay, any compounds that bind are selected, optionally after deconvolution of mixtures. Detection of a predetermined minimum level of the reporter indicates the presence of tumour cells. Inhibitors can be chosen from antisense oligonucleotides, short-interfering RNA or ribozymes; an organic molecule of molecular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention describes novel cytostatic polynucleotide and polypeptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New nucleic acids, and encoded proteins, from prostatic cancer tissue, useful for diagnosis, treatment and in screening for specific binding

polypeptide, preferably humanised or human; an anti-idiody (Ab) against the polypeptide; a (monoclonal) antibody (Ab) against the polypeptide; a (monoclonal) antibody directed against Ab or any of the above derivatised with a reporter group, cell toxin, immunostimulatory molecules and/or radioisotope. The polynucleotides are identified in human prostatic cancer by differential expression analysis, using DNA microarrays, between normal and tumorous tissues, with (over) expression being detected by quantitative PCR. Analysis of prostatic cancer samples showed that Drostatic cancer patients, or subjects at risk, were incubated sequentially with anti-human CD4 murine monoclonal antibodies; biotinylated second antibody; streptavidin-conjugated horseradish peroxidase and then diaminobenzidine as colour former (brown) The samples were counterstained with hemalum (blue). Malignant cells stained strongly but non-malignant cells only weakly. In 15 of 63 samples of adenocarcinoma, membrane and cytoplasmic staining was very strong, and lymph node metastases were also stained. ADR65805-ADR66954 represent the polynucleotide and polypeptide sequences used in the method of the
preferably 300, that binds
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  invention.

The invention relates to a substantially purified nectin3alpha, beta, gamma and nectin-4 polypeptides and their corresponding polynuclectides. Nectin DNA and protein are useful for treating a disease associated with cell adhesion activity, adherens junction formation activity, epithelial or endothelial barrier function activity, endothelial proliferation or endothelial barrier function activity, endothelial proliferation or endothelial barrier function disorder which is treated by the above mentioned method is inflammation, sepsis, oedema, diabetic retinopathy, asthma, allergy, allograft rejection, metastasis of cancer cells, paracellular transport disorders such as magnesium transport defects in the kidney or inflammatory bowel disease. Nectin DNA is also useful for inhibiting anglogenesis in a mammal and treating endothelial migration.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               proliferation or angiogenic condition of a tissue or a subject, such as ischaemia, atherosclerosis, ischaemia-reperfusion injury, thrombosis, stroke, restenosis, tumour growth and treating herpesvirus infection. Nectin is also useful for modulating proliferation or migration of an endothelial cell, an epithelial cell or a smooth muscle cell (vascular smooth muscle cell). The present sequence is a fusion protein containing human nectin-3beta protein fused to immunoglobulin IgG1 Fc region
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1 MARTPGPSPLCPGGGKAQLSSASLLGAGLLLQPPTPPPLLLLLFPLLLFSRLCGALAGPI

CC gamma and nectin-4 polypeptides and their corresponding polynucleotides.

Nectin DNA and protein are useful for treating a disease associated with cell adhesion activity, adherens junction formation activity, epithelial corremothelial barrier function activity, endothelial proliferation or migration activity, viral polypeptide binding activity. The epithelial correct function disorder which is treated by the above mentioned method is inflammation, sepsis, oedema, diabetic retinopathy, asthma, allergy, allograft rejection, metastasis of cancer cells, active kidney or inflammatory bowel disease. Nectin DNA is also useful for inhibiting angiogenesis in a mammal and treating endothelial migration, inhibiting angiogenesis in a mammal and treating endothelial migration, stochaemia, atherosclerosis, ischaemia-reperfusion injury, thrombosis, stroke, restenosis, tumour growth and treating herpesvirus infection.

CR ischaemia, also useful for modulating proliferation or migration of an endothelial cell, an epithelial cell or a smooth muscle cell (vascular prizer, reached). The present sequence is human nectin-3beta-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö

                                                                                                                                                                                                                                                                                                                                                           셤
                                                                                                                                                                                                                                                                                                                                                                                                  ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            gamma and nectin-4 polypeptides and their corresponding polynucleotides. Nectin DNA and protein are useful for treating a disease associated with cell adhesion activity, adherens junction formation activity, epithelial or endothelial barrier function activity, endothelial proliferation or migration activity, viral polypeptide binding activity. The epithelial or endothelial barrier function disorder which is treated by the above mentioned method is inflammation, sepsis, oedema, diabetic retinopathy, astemnia, allergy, allograft rejection, metastasis of cancer cells, paracellular transport disorders such as magnesium transport defects in the kidney or inflammatory bowel disease. Nectin DNA is also useful for inhibiting angiogenesis in a mammal and treating endothelial migration,
                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel purified nectin-3 and nectin-4 polypeptides which bind to nectin-1, useful for treating or preventing heart failure, malaria, glomerulonephritis, endometriosis, leukemia, asthma, allergy, edema,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             proliferation or angiogenic condition of a tissue or a subject, such as ischaemia, atherosclerosis, ischaemia-reperfusion injury, thrombosis, stroke, restenosis, tumour growth and treating herpesvirus infection. Nectin is also useful for modulating proliferation or migration of an endothelial cell, an epithelial cell or a smooth muscle cell (vascular somoth muscle cell). The present sequence is a fusion protein containing mouse nectin-3 protein and human nectin-3alpha protein. Human nectin-3 alpha gene is located on chromosome 3. (Updated on 29-AUG-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            1 MARTPGPSPLCPGGGKAQLSSASLLGAGILLQPPTPPPLLLLLFPLLLFSRLCGALAGPI 60
